# Hemlibra & Hemophilia

### The Facts

- A person with a hemophilia has blood that does not clot like it should.
  - ° It mostly affects males but can cause a milder version in females.
  - ° There is no cure.
  - ° It is a life-long condition.
- People with hemophilia do not bleed faster than normal but have a harder time stopping the bleeding.
- Bleeding inside the body is the main problem. A person will not bleed heavily from small cuts or scrapes.
- This student takes a medicine called Hemlibra to help prevent bleeding. Close monitoring for bleeding is still needed. Additional bleeding medications may need to be given for bleeding episodes.

- Mouth bleeds
- Bleeding with small cuts and scrapes
- Joints: knees, elbows ankles (long-term can lead to arthritis and inability to the joint)
- Traumatic injuries (life-threatening if located in head, neck, eye, throat, or abdomen)

## **School Considerations**

- Some people may have more bleeding episodes than others while taking Hemlibra.
- Please allow for a 504 plan if indicated.

### If You Suspect a Joint Bleed

- Ask the student if s/he is having a joint bleed. (The student is trained to identify bleeds.)
- Look for warmth, pain, lack of use, or guarding.
- Contact the parent and school nurse.
- Allow student to give replacement factor by intravenous infusion if instructed to by the parent or physician.

#### **Aid for Minor Bleeding**

Hemophilia <sup>of</sup> Georgia

- Rest, Ice, Compression, Elevation
- Cuts and scrapes: clean, apply pressure, and bandage
- **Nosebleeds:** hold head straight (not back) and apply pressure
- Mouth bleeds: apply ice or cold compress
- Headache (not from injury): give Tylenol only. If not relieved in two hours or accompanied by other symptoms, contact the parent.

#### **Emergency Bleeding**

- Head: nausea, vomiting, headache, confusion, blurred vision, or loss of consciousness
- Eye: trauma and bleeding into and around the eye
- Neck and throat: pain, swelling, difficulty swallowing, or breathing
- Abdomen: trauma to abdomen, acute tenderness, pain, or swelling

#### In an Emergency:

- Call 911.
- Inform the parent.
- Notify EMS the child has a bleeding disorder.
- Contact the Hemophilia Treatment Center.
